## INTEREST

Broadly, I am interested in designing machine learning algorithms which can process large-amount of multi-modal information with no/weak supervision. I have designed algorithms which scaled to tens of thousands of videos, point clouds with hundreds of millions of points and deployed them in robots, mobile devices and homes. I mostly worked on classification/parsing/segmentation problems in robot perception and mobile multimedia, using graphical models, metric learning and deep learning. In general, I am interested in any problem related to machine learning and large-scale data.

## EDUCATION

**Cornell University**, Ithaca, NY

December 2016

PhD in Computer Engineering

GPA: 4.00/4.00

Advisor: Ashutosh Saxena

Thesis: Learning from large-scale visual data for robots.

**Middle East Technical University**, Ankara, Turkey

June 2012

BS and MS in Electrical and Electronics Engineering

GPA: 3.93(MS), 3.88(BS)/4.00

Advisor: Aydın Alatan

An Efficient Graph-Theoretical Approach for Interactive Mobile Image & Video Segmentation

HONOURS  
AND AWARDS

10 Breakthrough Technologies in 2016 by MIT Technology Review (Robots sharing knowledge) 2016

Jacobs Scholar Fellowship 2013

METU Best Master Thesis Award 2012 – 2013

IEEE-eXtreme Programming Competition 5.0, (1st place Nationwide, 8th place Europe) 2012

METU Electrical Engineering Bachelor Thesis Award 2010

XPLORE New Automation Award (Top 17 projects worldwide in the category of recreation) 2009

IEEE Foundation Grant Recipient 2009

Chairperson, IEEE Computer Society METU Student Branch 2007 – 2008

Dr Bulent Kerim Altay Award (given by the METU EE Department to the student who ranks first in his/her class) 2006 – 2007

National Olympiad in Informatics (Regional degree - 1st place) 2004

PROFESSIONAL  
EXPERIENCE

**Artificial Intelligence Laboratory**, Stanford University, CA

December 2016 – Present

Post Doctoral Researcher

Advised by Prof. Silvio Savarese.

Worked on the geometrical understanding of deep learning architectures. Studied the geometry of feature spaces learned by convolutional neural networks (CNNs) which resulted in a theoretical understanding of generalization properties of CNNs *in Submission*. Further extended these results to transfer learning problems and developed a domain adaptation (*in NIPS 2016*) and active learning algorithm (*in Submission*) with theoretical guarantees.

**Brain of Things**, Redwood City, CA

December 2015 – July 2016

Machine Learning Consultant

Interviewed engineers, designed system architectures and helped scaling the company from 1 house to 100+ houses all over California.

On the technical side; developed a multi-sensor machine learning algorithm which can track humans in a smart-environment using motion sensors and cameras. And, developed machine learning algorithms to learn human preferences in a smart environment.

**Artificial Intelligence Laboratory**, Stanford University, CA  
Visiting Scholar

August 2014 – December 2016

Advised by Prof. Silvio Savarese and Prof. Ashutosh Saxena.

Worked on large-scale machine learning algorithms for computer vision.

Developed a transductive machine learning algorithm for unsupervised domain adaptation problem. The resulting algorithm enables machine learning models to be trained on one domain and used in other ones (*in NIPS 2016*).

Developed a structured parsing algorithm which can parse large point clouds of buildings into its semantic elements near real time. (*in CVPR 2016*).

Developed a large-scale, unsupervised video understanding framework using category specific youtube videos. The resulting algorithm can parse large collection of videos by discovering the underlying activities. (*in ICCV 2015*).

**Robot Learning Research Group**, Cornell University, Ithaca, NY  
Research Assistant

August 2013 – August 2014

Advised by Prof. Ashutosh Saxena.

Studied graphical models from an efficiency perspective. Developed a geometric framework for efficient and explicit approximations of probability distributions over high dimensional spaces. Using the developed geometric understanding, proposed a novel inference mechanism -rCRF- in order to efficiently, accurately and explicitly represent a belief over any CRF model using structured diversity (*in RSS 2015 and an invited talk at AAAI 2016*). Further extended the developed geometric approach to efficient learning algorithm for graphical models with hidden nodes and non-parametric priors (*in the process of submission*).

Designed a large-scale multi-modal processing and storage system which scales to millions of videos, images and text as a part of the RoboBrain ([www.robobrain.me](http://www.robobrain.me)) project (*in ISRR 2015*).

**Multimedia Research Group**, METU, Ankara, Turkey  
Research Assistant

February 2011 – August 2013

*Worked in collaboration with Nokia Research Center, Tampere.*

Advised by Prof. Aydın Alatan (METU) and Dr. Kemal Ugur (Nokia Research Center, Tampere).

Developed an efficient interactive video segmentation algorithm via Markov random field energy propagation. Proposed a dynamic method to reuse residual-flows in filtering scenario for time efficiency (*in Transaction on Multimedia 2013*).

Developed a method efficiently solving interactive image segmentation problem via dynamic and iterative graph-cuts. Furthermore, improved the robustness of the method via automatic correction of user interaction errors (*in ACM-MM-W 2012, ICIP 2012*).

Involved in patent application and deployed part of the developed algorithms to production on Nokia N9.

**Siemens Corporate Research**, Princeton, NJ  
Research Intern in Imaging, Analytics and Informatics Department  
Advised by Dr. Bogdan Georgescu and Dr. Yang Wang

August 2010 – February 2011

Contributed to the development of the LVA(Left Ventricle Anatomy) software. Developed a learning based method for automatic classification of volume contrast echocardiography data.
